

National Cancer Patient Experience Programme

2011/12 National Survey

Epsom and St Helier University Hospitals NHS Trust

Published August 2012

The National Cancer Patient Experience Survey Programme is being undertaken by Quality Health on behalf of the Department of Health

Introduction

The Cancer Patient Experience Survey 2011/12 (CPES) follows the successful implementation of the 2010 CPES, designed to monitor national progress on cancer care. The 2011/12 survey is congruent with the National Operating Framework (NOF) for the NHS 2012/13, which defines quality as those indicators of safety, effectiveness and patient experience that indicate that standards are being maintained or improved. The CPES thus provides information that can be used to drive local quality improvements, both by Trusts and Commissioners, and is consistent with the objectives of the NOF and the Outcomes Framework.

Participating Trusts

160 acute hospital NHS Trusts providing cancer services took part in the survey. Primary Care Trusts, some of whom provide cancer services, were excluded from the survey, as were some specialist hospital Trusts because of very low patient numbers.

Patients selected to take part

The survey included all adult patients (aged 16 and over) with a primary diagnosis of cancer who had been admitted to an NHS hospital as an inpatient or as a day case patient, and had been discharged between 1st September 2011 and 30th November 2011. The three month eligibility period for data capture purposes is identical to that for the 2010 CPES.

Patients eligible for the survey were taken from Trust patient administration systems; the inclusion criteria were that the patient had an International Classification of Disease (ICD10) code of C00-99 (excluding C44 and C84) or D05. As in the 2010 survey, the types of cancer patients included significant numbers with rarer cancers as well as patients in the "Big 4" cancer groups – i.e. breast, prostate, lung, and colorectal/Lower GI. The exclusion of patients with a cancer code of C84 (for example Mycosis Fungoides) was a new development for the 2012 survey; the number of patients so excluded nationally was very small.

Trust samples were checked rigorously for duplicates and patient lists were also de-duplicated nationally to ensure that patients did not receive multiple copies of the questionnaire.

Trust samples were rigorously checked for deceased patients through the DBS system on at least three occasions during the fieldwork, to ensure that the numbers of deceased patients in samples was reduced to an absolute minimum. This process was undertaken by Quality Health and was highly effective.

Survey method

Postal surveys were sent to patients' home addresses following their discharge. Up to two reminders were sent to non-responders. A freepost envelope was included for their replies. Patients could call a free telephone line to ask questions, complete the questionnaire verbally, or to access an interpreting service.

Response rate

A total of 113,808 patients who had received treatment for cancer during September to November 2011 were included in the national sample for the Cancer Patient Experience Survey. These patients were allocated to 13 different cancer groups.

354 eligible patients from this Trust were sent a survey, and 215 questionnaires were returned completed. This represents a response rate of 65% once deceased patients and questionnaires returned undelivered had been accounted for. The national response rate was 68% (71,793 respondents). In 2010 the national response rate was 67%.

Percentage scores

The questions in the cancer survey have been summarised as the percentage of patients who reported a positive experience. For example, "Percentage of patients who were given a complete explanation of their diagnostic tests" and "Percentage of patients who said that nurses did NOT talk in front of them as if they were not there". Neutral responses, such as "Don't know" and "I did not need an explanation" are not included in the denominator when computing the score.

The higher the score, the better the Trust's performance.

Low numbers of respondents and data not reported

Some Trusts have relatively small numbers of cancer patients, so the total number of respondents to the survey may be low despite the high response rate. Reports for these Trusts have been completed in the normal way, but the results for these Trusts need to be treated with caution. It is important to recognise however, that the low numbers of respondents in these Trusts is simply the result of low numbers of cancer patients being treated.

Patients were asked to complete the questionnaire in respect of the Trust named on the covering letter. In those Trusts without a radiotherapy or chemotherapy unit, where patients reported receiving these treatments despite these instructions, responses have been suppressed.

In almost all Trusts, there were tumour groups where the number of respondents was less than 20; this is particularly true of tumour groups representing rarer cancers. Where numbers of respondents in a particular tumour group is less than 20, we have used the convention of leaving the relevant cell blank. This is further explained in the introduction to the tumour group tables in this report.

Benchmark charts

Percentage scores are displayed on benchmark bar charts in the following section. Each bar represents the range of results across all Trusts that took part in the survey for one question. The bar is divided into:

- a red section: scores for the lowest-scoring 20% of Trusts in 2011/12
- a green section: scores for the highest-scoring 20% of Trusts in 2011/12
- an amber section: scores for the remaining 60% of Trusts in 2011/12

The black circle represents the score for this Trust. For example, if the circle is in the green section of the bar, it means that the Trust is among the top 20% of Trusts in England for that question. The line on either side of the circle shows the 95% confidence interval (the amount of uncertainty surrounding the Trust's score).

The table below each benchmarking chart shows the following: in column one, the Trust score for each question in 2010; in the second column, the Trust score for that question in 2011/12 (if this score is highlighted it means that the score is statistically significantly different from the score for 2010, with a blue highlight showing a higher value than in 2010, and a red highlight showing a lower score in 2012 than in 2010); column three represents the lower confidence interval at 95%; column four represents the upper confidence interval at 95% (the scores in columns three and four are the outer limits of the horizontal black line on the RAG chart). The fifth and sixth columns represent the upper threshold for the lowest scoring 20% of Trusts on that question and the lower threshold for the highest scoring 20% of Trusts on that question (i.e. the end of the red section and the beginning of the green section on the chart). The seventh column displays the highest Trust's score for this question in 2011/12 and the eighth column displays the number of respondents who gave this answer for this question. The ninth column displays a '+' alongside any question where the Trust's score falls within the lowest 20% of Trust scores for that question in 2011/12.

Where no Trust data or confidence interval is displayed on the RAG chart or in the tables for a particular question, there is insufficient data (below 20 respondents) to allow display.

Further information

Full details of the survey method are in the National Report of the Cancer Patient Experience Survey 2011/12, which will be available at www.quality-health.co.uk from 17th August 2012; further details of survey development, nationally agreed methodology, and cognitive testing are also available at www.quality-health.co.uk.

Who responded to the survey at this Trust?

215 patients responded to the survey from the Trust. The tables below show the numbers of patients from each tumour group and the age and sex distribution of these patients.

Respondents by tumour group

Tumour Group	Number of respondents*
Breast	0
Colorectal / Lower Gastrointestinal	33
Lung	8
Prostate	1
Brain/Central Nervous System	1
Gynaecological	4
Haematological	96
Head and Neck	0
Sarcoma	0
Skin	2
Upper Gastrointestinal	2
Urological	68
Other	0

* These figures will not match the numerator for all questions in the 'comparisons by tumour group' section of this report because not all questions were answered by all responders.

Age and sex

The survey asked respondents to give their year of birth. This information has been amalgamated into 6 age bands. 5 people did not provide their gender or age. Of the 210 who did, the age and gender distribution for the Trust was as follows:

	16-25	26-35	36-50	51-65	66-75	75+	Missing	Total
Men	0	0	5	33	40	56	2	136
Women	0	1	4	20	19	27	3	74
Total	0	1	9	53	59	83	5	210

The National Cancer Patient Experience Survey was undertaken by Quality Health, which specialises in measuring patients' experiences of hospital, primary care and mental health services, using this information to improve the quality of health care and the responsiveness of health services to patients and service users' needs.

Quality Health works with all acute hospitals in England, all independent providers of hospital care, and all Health Boards in Scotland using rigorous survey methods to evaluate the quality of services to patients, the outcomes of operative procedures and health gain, and establish the views of NHS staff. Quality Health also works for healthcare system providers in Wales and Northern Ireland.

Quality Health is an approved contractor for the Care Quality Commission survey programmes of patients and staff in the NHS and also undertakes data collection and survey systems for the National Patient Reported Outcomes programme on behalf of the Department of Health. Quality Health has headquarters in North Derbyshire.

Further information on the National Cancer Patient Experience Survey programme and the 2011-12 survey can be obtained at www.quality-health.co.uk
